

Using a Ruler to Measure Plant Height

Notes

The presentation shows the correct way to use a ruler to measure plant height.

Please note that some buttons may need to be pressed twice to activate them. This is because the presentation contains both animation and slides.

The first slide shows some common mistakes when using a ruler. Press the play button and discuss each one before revealing the answer. The sequence of errors is shown below:

- ruler base not at ground level
- looking down onto the scale
- looking up onto the scale
- correct when looking level with the scale

Subsequent slides show pictures of flowers and ask the children to read from the different scales.
